DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-7, drawn to an adhesion preventive kit.

Group II, claims 11-14 and 16-21, drawn to a method of preventing adhesion.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the common technical feature among the inventions is the adhesion preventive device, which is not novel as evidenced by Matsuda *et al.* (U.S. Patent Application Publication No. 2003/0114061; Filed Dec. 12, 2002; Reference #1 under the U.S. Patent Application Publication section on page 2 of the IDS submitted by applicant dated Feb. 25, 2008). Specifically, Matsuda *et al.* disclose adhesion preventative membranes (abstract) that may be comprised of a first membrane comprised of a collagen nonwoven fabric (i.e. a biodegradable base layer) that may be laminated with other layers, such as collagen and/or hyaluronic acid that prevent adhesion (paragraphs [0092] and [0163]). Thus, the first membrane is at least two layers (paragraph [0157]). Further, the other layers may themselves constitute coated adhesion preventive membranes (i.e. second (or third)

Art Unit: 4161

membranes), for example coated collagen strands (paragraphs [0157] and [0158]). Thus the adhesion preventative kit of instant claim 1 is disclosed by Matsuda *et al.* and the technical feature is not a contribution over the art and is not a special technical feature as defined under PCT Rule 13.2, Part I (b). Thus, the Groups do not share a common special technical feature and are subject to restriction.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

4. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

5. In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product

Art Unit: 4161

claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
